THE BURPEE Sweet Corn

*Rich and Sweet—Larger and Earlier
than the Famous Burpee
Golden Bantam*

Twelve years ago BURPEE'S ANNUAL listed Golden Bantam Corn as becoming each year more firmly fixed in popular favor because of its "extremely early character, vigorous growth, and surpassingly delicious flavor." Since that time Golden Bantam has come to be recognized everywhere as a standard for early Sweet Corn, the closest possible approach to absolute perfection.

In **The Burpee Sweet Corn** the special qualities which made Golden Bantam so universally successful in market, farm, and home gardens, have been developed to a still higher degree. "**THE BURPEE**" matures even earlier — from seven to nine days before the old favorite; is of larger size, and has the same inimitable toothsome flavor.

The Burpee Sweet Corn ◎

The ears are fully seven inches long, very slightly tapering from a butt one and three-quarter inches in diameter. The broad, richly colored golden kernels are evenly placed on the small cob. The plants, averaging from five to five and one-half feet in height, are admirably adapted, like the Golden Bantam, to cultivation in small gardens and intensive acreage production.

"**THE BURPEE**," larger than the Golden Bantam, of equally delicious flavor and maturing from a week to nine days earlier, will be a sensational novelty, bound to eclipse all other extremely early varieties.

Burpee's Seeds Grow

Fifty years ago, when W. ATLEE BURPEE, the founder of the Burpee business, told his friends of his decision to **Guarantee** the seeds he sold to **Grow**, they expressed great concern about the success of such an unusual step.

It was his firm belief in the honesty and fair judgment of those who till the soil that gave W. ATLEE BURPEE the courage to offer his seeds on a money back guarantee. This principle of the founder has become the cornerstone of the Burpee Business of today.

Burpee GUARANTEE

We guarantee the vitality and purity of our seeds to the full amount of the purchase price. You can have your money back any time within the year if you are not satisfied with the results from Burpee's Seeds.

Even with Burpee Quality Seeds success in gardening or farming depends largely upon cultivation, soil, and weather conditions. It is therefore agreed that in no case shall W. ATLEE BURPEE Co. be liable for more than the amount actually paid for the seeds or bulbs.

We guarantee the safe arrival of your seeds, and we guarantee their quality to the full amount of the purchase price.

Planting Dates for Vegetables

See *Planting Calendar for Flowers, page 77*

The wide-awake gardener begins sowing early in the spring, and sows succession crops throughout the summer, until late in the fall. Succession crops are most important, since they provide fresh vegetables for fall and winter use, and a cellar full of stored vegetables is a good investment.

The dates apply to the vicinity of Philadelphia and localities with similar weather conditions, where the first light fall frosts occur about the middle of October and severe frosts around the first of November. The outdoor sowing season begins late in March or early in April, depending on the condition of the ground. In cooler sections sow correspondingly later in the spring and make the midsummer and fall sowings correspondingly earlier.

Burpee's Beets

Beets are of universal culture. It is advisable to make repeated sowings in order that a constant supply of tender young roots may be had throughout the season. Seed may be sown as **early in the spring** as the ground can be worked into good condition. **Sowings should be made for succession at least once a month up to the end of July.** We recommend making a large sowing early in July to produce a supply of full-grown roots for winter use. If the roots are gathered with the approach of cold weather and kept in a cool cellar packed in slightly moist earth, they remain in perfect condition throughout the winter until spring.

The seed should be sown thinly in drills from $\frac{1}{2}$ to 1 inch in depth, leaving 12 inches or more between the rows to admit cultivation. When well started, thin the plants to stand 3 to 4 inches apart in the row. One ounce will sow 100 feet of drill; 4 to 6 pounds are needed per acre in drills.

121 Burpee's Black Red Ball

Burpee's Black Red Ball is remarkable for its uniform shape, deep-colored flesh, and fine sweet flavor. The globe-shaped roots are smooth and free from any woody fiber. Both skin and flesh are of an unusually **deep rich red**, this intensity of color being retained when cooked, making the beets most attractive for both canning and pickling. Although very early (quickly reaching a diameter of 2 inches), if left growing, the larger roots retain their fine flavor and deep coloring. Fully grown roots measure 3 inches across. Excellent for the home garden, and one of the best varieties for market on account of its earliness. Pkt. 10¢; oz. 25¢; 4 ozs. 60¢; $\frac{1}{2}$ lb. 85¢; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.60; 10 lbs. \$12.00, postpaid.

111 Crosby's Egyptian

This variety is grown extensively by the leading market growers because it is one of the earliest to be ready for market. The skin is smooth and of a dark red color. The foliage is rather sparse and erect. The roots are almost round, with a small tap-root and a very small crown of leaves. The flesh of the beets is **deep blood-red**, with slightly lighter zonings. The texture is crisp and free from fiber. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; $\frac{1}{2}$ lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

119 Burpee's Sunnybrook

This fine Burpee introduction is almost globular in form. The roots are of medium size and have a dull dark crimson skin. The flesh is **deep crimson** throughout, fine grained, tender, and very sweet. The foliage is deep green with crimson veins and stalks. It is an ideal all-season variety, of uniform growth and even size. Of compact habit, with comparatively few leaves.

Pkt. 10¢; oz. 25¢; 4 ozs. 65¢; $\frac{1}{2}$ lb. \$1.00; lb. \$1.75; 2 lbs. \$3.20, postpaid.

128 Improved Blood

Burpee's Smooth round roots of medium size, with dark red flesh retaining its deep color when cooked. The flavor is exceptionally fine and sweet. Burpee's Improved Blood grows quickly and is easily stored for winter. In our opinion it is the tastiest early beet. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; $\frac{1}{2}$ lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

These collections contain the three fine varieties: **Burpee's Improved Blood**, **Detroit Dark Red**, and **Burpee's Extra Early**. Will be mailed postpaid.

115 Detroit Dark Red ◎

The roots are globular or ovoid. They are smooth and have but little tops. The skin is blood-red and the flesh dark red, zoned with a lighter shade. The flesh is tender and the flavor decidedly sweet. Excellent for the home garden and for market. A most attractive variety. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

109 Extra-Early Flat Egyptian

This variety is one of the earliest of all beets and produces roots which grow about 2 inches in diameter. These roots are distinctly flat and have a smooth surface. It is usually somewhat smaller than Crosby's Egyptian and of a very dark red color. The foliage is sparse and consequently the leaf crown is small. The flesh is sweet and tender and free from any hard fiber. The color of the flesh is dark purplish red zoned with a lighter red shade. Because of its attractive shape and color it is grown widely both for home use and for market. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; lb. 95¢; 2 lbs. \$1.70; 5 lbs. \$4.05; 10 lbs. \$7.10, postpaid.

113 Edmand's Early ◎

A well-known second-early beet, excellent for the home garden, market, or for canning. The foliage is sparse and of an erect growth. The roots are nearly round in shape. The skin is a deep blackish red and the flesh is purplish red, with little zoning of a lighter color. It is a good keeper of quick growth and may be kept in perfect condition throughout the winter until late spring. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

125 Early Wonder

A selection from Crosby's Egyptian, but a few days later. The roots are nearly **globe shaped**, uniform in size, with little foliage. The skin is deep red and the flesh is a rich dark color, with little zoning. Of excellent quality. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; 1/2 lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00, postpaid.

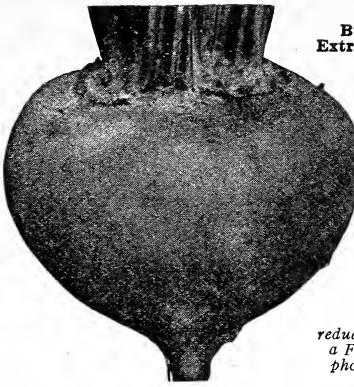

134 Burpee's New Half-Long ◎

This is, without exception, the finest strain of a half-long beet we have ever seen in our Fordhook trial-grounds. When cut, the flesh is deep maroon-red, approaching black, and is free from zoning. The flesh is finely grained, smooth, free from hard fiber, and of sweet flavor. Like other intermediate varieties, Burpee's New Half-Long is particularly fine for winter storing, keeping well until the spring. The roots are uniform, and quite thick throughout. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; 1/2 lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00, postpaid.

131 Long Smooth Blood-Red

The roots are almost 12 inches long, and 1 1/2 to 2 inches in diameter. The skin is smooth and uniform, and dark red in color. The flesh is blackish red. Of very fine quality. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

107 Burpee's Extra-Early ◎

This is very early and of excellent quality. The roots are somewhat flattened, **smooth**, and regular. The flesh, in alternate rings of light and dark pink, is particularly tender and sweet. This is considered the finest earliest beet with very small tops. Excellent for an early crop and well adapted to hot-house forcing. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; 1/2 lb. 75¢; lb. \$1.25; 2 lbs. \$2.30; 5 lbs. \$5.50; 10 lbs. \$10.00, postpaid.

117 Burpee's Columbia ◎

A superb main-crop garden beet. The roots are of neat turnip shape, growing 3 to 4 inches in diameter, with a thick shoulder, but quickly tapering in the lower portion. The skin of the roots is smooth and entirely free from small rootlets. The flesh is a beautiful deep blood-red. It is tender and of the richest flavor. The roots **can be used early** in the season when only partially grown. Burpee's Columbia retains its **choice quality** and absolute freedom from woodiness until the beets have reached their full size. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

SUGAR BEETS

Sugar beets are grown for the purpose of extracting the sugar and also for stock feeding. The seed should be sown thinly in drills 2 to 3 feet apart and covered 1 to 1½ inches deep. The seed may be sown any time during April, May, or June. One ounce sows 100 feet of drill. Five pounds per acre in drills. Sown broadcast, 15 to 20 pounds per acre are needed for a good stand.

139 Burpee's Danish Improved ◎

Roots of thick oval form and very productive. Rich in sugar and most desirable for stock feeding. Bright green foliage; leaf-stalks and skin shaded pink. The roots are easily harvested and keep a long time. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 40¢; lb. 65¢; 2 lbs. \$1.15; 5 lbs. \$2.60; 10 lbs. \$4.85, postpaid.

143 Wanzleben ◎

The roots are 7 to 8 inches long. They can be grown as close as 5 inches apart in the row and 2 feet between the rows. Smooth, with a broad shoulder gradually tapering toward the base. An enormous yielder, grown extensively in many sections for sugar. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 40¢; lb. 65¢; 2 lbs. \$1.15; 5 lbs. \$2.60; 10 lbs. \$4.85, postpaid.

145 Giant Half-Sugar Rose ◎

Broad, thick, wedge-shaped roots, 10 to 12 inches long. The upper portion is bright rose, the lower third being white. The flesh is pure white, firm, and very rich in sugar. It yields a tremendous crop. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 40¢; lb. 65¢; 2 lbs. \$1.15; 5 lbs. \$2.60; 10 lbs. \$4.85, postpaid.

MANGELS

For Stock Feeding

These require the same soil and climatic conditions as sugar beets and are sown any time up to June 15. Mangel-Wurzels are very valuable for stock feeding, particularly in sections where it is too cool to grow a good crop of corn. One ounce sows 100 feet of drill; 5 pounds per acre in drills. Sown broadcast, 15 to 20 pounds per acre.

151 Mammoth Prize Long Red ◎

This is the heaviest cropping and largest of all mangels. Under favorable conditions this variety yields from 35 to 50 tons per acre. The roots grow from ½ to ¾ above the surface and are frequently 2 feet or more in length by 6 inches in diameter. Skin bright red; flesh white, veined pink. They are easily harvested because of their cylindrical shape and their heavy growth above soil. Pkt. 10¢; oz. 15¢; 4 ozs. 25¢; ½ lb. 40¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.40; 10 lbs. \$4.50, postpaid.

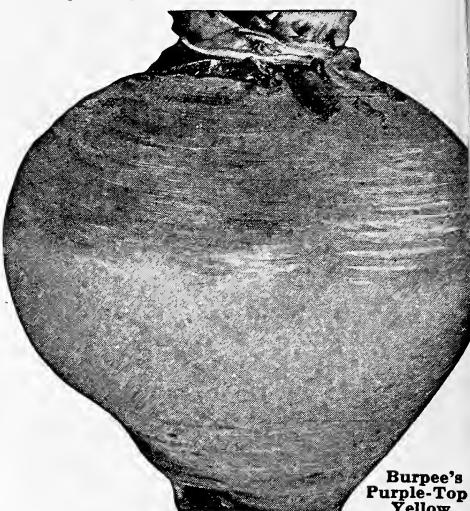

147 Golden Tankard ◎

A smooth, yellow-fleshed mangel; yields large crops on good land and is easily harvested. The roots are heavy and solid. They are nearly cylindrical in shape, narrowing uprightly at both ends. The flesh is firm and the roots are excellent keepers. Widely grown for stock feeding. Pkt. 10¢; oz. 15¢; 4 ozs. 25¢; ½ lb. 40¢; lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.40; 10 lbs. \$4.50, postpaid.

RUTABAGAS

Winter Turnips

Rutabagas are also called Swedes, Swedish Turnips, or Russian Turnips. They are more solid, of firmer flesh, and therefore keep later into spring than turnips. They require about 4 weeks longer in which to mature than common turnips, and at this latitude, Philadelphia, seed should be sown from the first to the middle of July to make large roots for winter keeping. One ounce for 400 feet of drill; 1 to 2 pounds per acre in drills, 4 to 5 pounds per acre broadcast.

Burpee's
Purple-Top
Yellow
Rutabaga

1191 Burpee's Purple-Top Yellow ◎

Produces large, smooth, globe-shaped roots with rich purplish coloring in the upper portion and deep yellow below the soil. Productive and will keep in fine condition until quite late in the spring. The flesh is rich yellow, fine-grained, and very sweet. A good winter variety. Grown extensively for table use throughout the fall, winter, and early spring. It is a favorite variety in some sections for stock feeding because it yields very satisfactorily. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 45¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.60, postpaid.

1194 Golden Neckless ◎

This is a favorite winter turnip with attractive roots of almost globular shape. They are inclined to grow slightly top-shaped as they increase in size. The flesh is finely grained and of a beautiful **creamy yellow** color. It is solid and of excellent quality. Golden Neckless has a very small neck and yields heavily. The roots are easily stored and keep well throughout the winter until the following spring. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 45¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.60, postpaid.

1196 White-Fleshed Neckless

The skin and flesh are white. The roots are large and solid. Their shape is elongated and the skin smooth and even. Of choice quality and grown extensively for table use as well as for cattle feeding. A splendid keeper. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; ½ lb. 45¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.60, postpaid.

Table Turnips

Turnips develop best during cool weather, and in the vicinity of Philadelphia a fine crop can be grown from seed sown early in the spring. But turnips are most important as a fall crop. **For fall or winter use sow the seed between the middle of July and August 20** in rows not less than 18 inches apart, and cover with $\frac{1}{2}$ to $\frac{3}{4}$ inch of fine soil. The most popular method, however, is to broadcast the seed either between the rows of corn or in the cultivated orchard. The early white varieties are often sown as a catch crop after early potatoes. One ounce will sow 400 feet of drill. In drills, 1 to 2 pounds per acre, sown broadcast, 4 to 5 pounds of seed are needed per acre.

1169 White Egg

White Egg Turnip is an old favorite with both home gardeners and market growers. The roots are of typical egg-shape. The skin is thin and almost white. The flesh is pure white, mealy, fine grained, and entirely free from any hard fiber or woody substance. When prepared for the table, the roots are tender, crisp, and of fine sweet flavor. It is an excellent variety for winter. Pkt. 10¢; oz. 15¢; 4 ozs. 35¢; $\frac{1}{2}$ lb. 50¢; lb. 85¢; 2 lbs. \$1.55; 5 lbs. \$3.60; 10 lbs. \$6.35, postpaid.

1163 Purple-Top White Globe

This is a well-known turnip, also sold under the name of Red Top White Globe. The roots grow to good size, measuring 6 inches and more in diameter. They are nearly round in shape and show a rich purplish red color on the upper part of the roots which extends above the surface. The lower portion is creamy white. The flesh is white, firm, crisp, and of remarkably mild flavor. Pkt. 10¢; oz. 15¢; 4 ozs. 30¢; $\frac{1}{2}$ lb. 45¢; lb. 75¢; 2 lbs. \$1.35; 5 lbs. \$3.20; 10 lbs. \$5.60, postpaid.

1161 Extra-Early Purple-Top Milan

The bulbs are flat, of medium size, smooth, with crisp white flesh of excellent flavor. The upper portion of the bulb is a rich purple, but the lower half is pure white. It is well adapted for early forcing. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; $\frac{1}{2}$ lb. 60¢; lb. \$1.00; 2 lbs. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

1159 Extra-Early White Milan

Attractive small roots with a pure white smooth skin. They are flattened with a small tap-root. Extra-Early White Milan is a quick-growing variety of fine flavor, with fine-grained white flesh. The roots grow to medium size. Of handy size, good appearance, and excellent quality. BURPEE'S RADISHES

There are three distinct classes of radishes—Spring Radishes, Summer Radishes, and Winter Radishes. Every complete garden should include some of each class.

The Spring Radishes can be grown almost all the year around, and are important as a forcing crop during winter. They mature in the open from 25 to 40 days, depending on the variety and the weather. They develop best during the cool season. Light sandy soil, rich in organic matter, is essential to produce crisp and tender radishes. **Plant as early in the spring as possible, and make succession plantings every 10 days.** Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about one-quarter inch of fine soil. One ounce is sufficient for 100 feet of drill; 8 to 10 pounds of seed are needed to sow one acre planted in drills.

Nature lovers will recognize in the picture their old friend—JOHN BURROUGHS. Here he is in his garden patch inspecting one of his Hubbard Squashes. He sent this squash, which weighed 23 lbs., to Thomas Edison and wrote that he raised squashes aggregating 115 lbs. in weight in a hill of four plants. Burpee's Seeds were a regular feature in Mr. Burroughs' garden, and not long before his death he wrote us about how well pleased he was with Burpee's Seeds.

Burpee's ONIONS

Onions rank as one of the foremost vegetables in American gardens. They are highly praised for their tonic qualities, and doctors everywhere are advocating the use of them in the diet because they are wholesome and nutritious.

A good well-drained soil, reasonably fertile and well pulverized, will give the best crops. Cover the seed lightly and thin the seedlings when they are 3 to 4 inches tall so that they will have room to develop freely. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One ounce of seed for 200 feet of drill; 4 to 5 pounds per acre.

BURPEE'S PEPPERS

Although the pepper is at home in tropical and subtropical countries, it is grown successfully in nearly all parts of the United States. We are planting annually many acres of peppers for seed on BURPEE'S SUNNYBROOK FARM in New Jersey. It is a tender plant and cannot endure frost. The seed should be sown during February or March in a warm hotbed, or in boxes placed in the sunny window of a warm room. The seeds require plenty of moisture and warmth to germinate. The young plants are transplanted into small pots as soon as they can be handled. In the vicinity of Philadelphia the first week of May is about right for setting the plants in the open. One ounce will produce about 1,500 plants; 3 ounces for setting out one acre.

Quality is the first consideration in Burpee's Seeds. The best quality it is possible to produce—that is the rule with all Burpee's Seeds. While our prices may be in some cases slightly higher than those of some other houses, yet the quality in every case warrants the prices charged. We aim always to excel in quality rather than to compete in price.

Burpee's Musk-melon

The most suitable soil for melons is a warm, sandy loam, well worked and enriched with old compost. Sow the seed in slightly raised hills, 4 to 6 feet apart each way. Eight to 10 seeds are placed in each hill in a circle and are covered with an inch of fine soil. Melons thrive best on well-rotted compost, and a shovelful of old manure should be placed about $\frac{1}{2}$ foot deep under each hill and firmly tramped down. The seed should be planted after the soil has warmed up and the weather is quite settled—about the middle of May. One ounce of seed for 40 to 50 hills; 2 to 5 pounds per acre.

Burpee's Tomatoes

Tomatoes are among the most useful and most easily grown vegetables in a home garden. They thrive in widely different soils and climates; are not apt to be injured by insects or plant diseases; take up little room (when tied to stakes or grown against a sunny wall of the house); and yield enormously for the space occupied. They are exceedingly wholesome, rich in vitamins, and available as an appetizing dish in a great variety of forms.

What is more attractive on a hot day—either as salad or a garnishing—than fresh, ripe, red tomatoes? They may be cooked in innumerable different ways—by themselves or combined with other vegetables and meats. They are excellent when put up for winter use. The green fruit picked at the end of the season can be utilized for delicious pickles or preserves. When care is taken in selecting the right varieties, luscious fresh tomatoes, fully ripened on the vine, may be enjoyed from midsummer until frost.

For many years BURPEE has specialized in Tomatoes. Each year many acres of our great Pennsylvania and New Jersey farms are devoted exclusively to growing tomatoes.

Gardeners who are seeking to have good smooth tomatoes "first on market" can find nothing equal to this variety. A very prolific strain for the gardener who wants a first-class early variety. Cucumbers should be grown in every garden, to furnish both large fruits for slicing for the table and small young fruits for pickling. In most sections it will be best to make two sowings: one as early in the spring as the weather permits, to supply fruits for the table during the summer months, and a second about the last of June or first of July, to furnish fruits for fall use. This late sowing will also give the best supply of young fruits for pickling purposes: the cool fall months are the best time to put them up for winter use. One ounce is sufficient for 100 hills, and 1 to 2 pounds are needed to plant one acre.

381 Arlington White Spine

The cucumbers are very regular in outline and uniform in size, averaging 7 to 8 inches in length; straight, and of a rich dark green color. The flesh is **white, crisp, and solid**, with comparatively few seeds. It is one of the earliest and most productive of all cucumbers. The fruits have well-rounded ends and they are thick throughout their entire length. A large productive variety and fine for market. Pkt. 10¢; oz. 20¢; 4 ozs. 40¢; 1/2 lb. 60¢; 1 lb. \$1.00; 2 lbs. \$1.85; 5 lbs. \$4.40; 10 lbs. \$8.00, postpaid.

401 Early Fortune ◎

Early Fortune has been proclaimed the finest type of White Spine Cucumber ever introduced. It is an early disease-resistant variety and immensely productive. Fully grown fruits measure 9 inches long. The plants grow vigorously and the fruits are set very freely all along the vines. They are slightly tapering at both ends, with a well-rounded blossom and stem-end, measuring 2 1/2 inches across in the center of the fruits, where they are thickest.

The color of the thin skin is rich dark green, which does not fade when the fruits are shipped to distant markets. The texture of the pure white flesh is firm and crisp. The flavor is most delicious. The seed cavity is very small. Because of its thick white flesh and rich dark green skin it is in great demand by market growers, and for home use no finer cucumber could be wanted. Our stock of this favorite variety has proved to be unexcelled in every way.

Pkt. 10¢; oz. 25¢; 4 ozs. 50¢; 1/2 lb. 80¢; 1 lb. \$1.35; 2 lbs. \$2.50; 5 lbs. \$5.95; 10 lbs. \$10.80, postpaid.

Cucumbers for Pickling

The growing of cucumbers for pickles is a very important industry in certain sections of the United States. Cucumbers for pickles are usually planted in checks 6 x 6 feet or 6 x 3 feet apart, or in drills 6 feet apart. The time for planting pickling cucumbers varies according to the locality, but usually they are sown from June 1 until about July 1. The early plantings yield their first crop late in July and continue bearing until frost. The fruits for pickling are gathered when they are from 2 1/2 to 5 inches in length. Ofttimes the various varieties of Pickling Cucumbers are referred to as Gherkin, but the true Gherkin listed below is distinct, with its small prickly fruits. Choose a rich and moist soil for growing pickling cucumbers.

Burpee's Lettuce

Nothing is more appetizing and attractive on a table than crisp, fresh, tender lettuce. Nor is any other garden product more essential to health. The mineral salts of lettuce are an exceedingly valuable aid to digestion and body building.

The various varieties of Burpee's Lettuce are quick growing, practically free from plant diseases and the attacks of insects, and easy to cultivate. An early sowing may be made indoors, and the little plants set out as soon as the ground can be worked; at which time the first outdoor sowing also may be made. When this is followed up at intervals of about ten days with successive sowings, the delectable greens may be enjoyed throughout practically the whole garden season—except in sections where the summers are excessively hot.

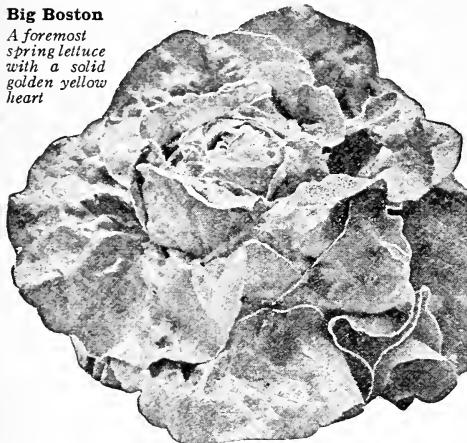

Each of the Burpee Specialties mentioned below is excellent of its kind, and will be found especially satisfactory as to quality and yield by both market and home gardeners.

Earliest and Forcing Lettuce

This type is grown extensively as a forcing crop in the greenhouse during winter and in the frames early in spring and late in the fall. All the varieties of this class are excellent for early sowing in the home garden or grown for a fall supply. Sown out-of-doors in early spring or in late summer, they will develop well during the cool weather, but they cannot withstand the heat of summer.

"Good as Gold" This mark (O), now called a bull's-eye, was used by the ancient alchemists to represent gold. We have used a bull's-eye (O) for many years to mark those varieties of Vegetables which we consider the very best of their class and most satisfactory for general cultivation throughout the country. If you are not posted as to the sorts most suitable for your own section, we recommend that you make your selection from those marked with a bull's-eye.

Lettuce should be eaten plentifully. It contains valuable mineral salts essential to the body and is wholesome and palatable.

BURPEE'S CABBAGE

Cabbage succeeds best in cool moist climates, and in rather heavy friable loams with gravelly subsoil. Early cabbage is sown in the hotbed or in the house about the middle of February. Late cabbage for winter use is sown during June. One ounce will produce about 2000 plants. If seeded outdoors, sow one ounce to 300 feet of drill. Two ounces sown in the hotbed will give sufficient plants to set out an acre; sow 6 ounces in the open seed-bed for planting out one acre.

Early Stonehead is a most desirable variety for the home garden and early market. Pkt. 10¢; oz. 35¢; 4 ozs. 95¢; $\frac{1}{2}$ lb. \$1.50; 1 lb. \$2.75; 2 lbs. \$5.10; 5 lbs. \$12.35, postpaid.

177 Burpee's Allhead Early ◎

The Earliest of all Large Cabbage

The deep flat heads are remarkably solid and are very uniform. Burpee's Allhead Early is really an all-the-year-round cabbage, being **equally good for winter**. Although it is usually grown for summer and fall use, if sown about July 10 (in the vicinity of Philadelphia), it will head up solidly before freezing weather sets in.

The compact growth of the plants permits close planting in the garden and therefore the yield from a given area will be very heavy. Market growers have found that the heads sell readily and always bring a good price on account of their **attractive appearance** and handy size. Pkt. 10¢; oz. 35¢; 4 ozs. \$1.00; $\frac{1}{2}$ lb. \$1.65; 1 lb. \$3.00; 2 lbs. \$5.60; 5 lbs. \$13.50, postpaid.

Healthful and tasty—either cooked or raw

The most essential requirement for successfully raising Chinese cabbage is cool weather. Where the summers are warm, sowing must be delayed until early August. In the vicinity of Philadelphia, the first week of August is the best time. The plants develop quickly, forming **large, tightly folded** heads of tender leaves which are well blanched in the heart. **Chinese cabbage can be served as salad like lettuce or, when cut, makes a delicious cole-slaw.** Boiled, it is even more palatable than ordinary cabbage. Ask for our free Service Bulletin on "CHINESE CABBAGE," which gives cultural directions and cooking recipes. One ounce of seed is enough for 500 feet of drill, if sown thinly.

Cauliflower

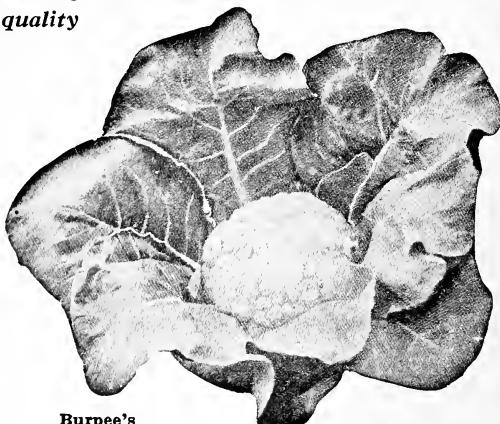

be grown even in warmer sections. To make the best and largest heads, the plants need cool moist weather, well-enriched soil, and thorough cultivation. Cauliflower is highly esteemed for its mild delicate flavor and the extreme tenderness of the solid white heads.

For an early crop start the seed indoors and set in the open about the end of April. For a main or fall crop, seed should be sown from June 1 to July 1 and the young plants set out during the latter part of July. In this locality (Philadelphia) the early dwarf varieties, such as Snowball, give best results also for the fall crop. Farther south the large late varieties are quite satisfactory for late or winter heading. One ounce will give from 1000 to 1500 good strong plants.

245 Burpee's Dry Weather Ⓜ

Drought-resisting, early, and of foremost quality

This produces solid, pure white heads, only about a week later than Burpee's Best Early. Burpee's Dry Weather is especially adapted for growing in dry locations where nearly all other varieties fail to make good heads. Every year we receive new testimony from customers who are growing this variety because of its **drought-resistant** quality. It is an excellent market and home garden variety which has proved to do well where other varieties of Cauliflower cannot be grown successfully. This great novelty is undoubtedly the finest and best of all early cauliflowers. The plants are dwarf and compact, measuring about 16 inches in diameter. The stem is short, so that the head is produced quite close to the ground. The heads are **very firm and solid**. They measure 6 to 9 inches in diameter and are of the very finest quality. We have cut fine heads in 85 days after sowing the seed.

Burpee's Fordhook Cauliflower has never failed to form good heads in our trials, even in a most unfavorable season and when all other early varieties were almost a complete failure. All who value a **quick-growing** and **sure-heading** cauliflower of superb quality will find these requisites in our new Fordhook Cauliflower. The compact plants may be set closely in the row. BURPEE'S CELERY

For the earliest crop sow in a hotbed during February or March. For the fall or main crop, seed may be sown in the open ground as early in the spring as the soil can be worked into good condition, and the plants should be set in the rows in July.

Celery requires a rich, well-manured soil, and plenty of moisture so that it can make a continuous growth. One ounce is sufficient for 600 feet of drill. One ounce sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ounces are needed for planting one acre.

Burpee's Golden Self-Blanching

262 Burpee's Golden Self-Blanching Celery ◎

Selected French-Grown Seed, Original Dwarf Strain

Although the seed grown in America the first year from the French stock, as offered below, gives general satisfaction in the home garden, yet most of the extensive growers insist upon having the French-grown seed, even though it costs nearly double the price.

The plants make a uniform, dwarf, and compact growth, with quite thick waxy yellow stalks of superior flavor. Crisp and nutty. Pkt. 25¢; 1/2 oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; 1/2 lb. \$6.60; lb. \$12.00, postpaid.

The foliage is also quite distinct and has been bred for disease resistance. The slender heart is well blanched. It is an extra-early variety which should be carefully tested by celery growers to determine its adaptability to their peculiar growing conditions and its market value. Because of their taller growth, the plants require more labor if they are blanched with earth. Pkt. 25¢; 1/2 oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; 1/2 lb. \$6.60; lb. \$12.00, postpaid.

272 Burpee's FORDHOOK Celery ◎

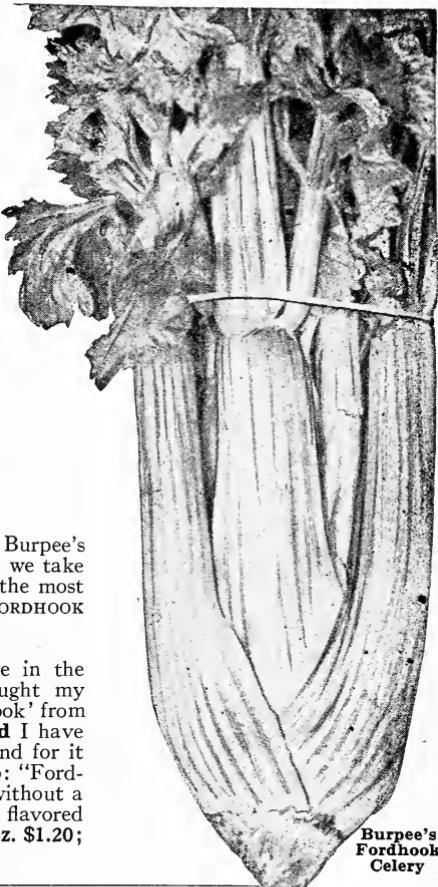

The Largest, Most Solid, and Finest Nut-Flavored Celery in Existence

Burpee's Fordhook Celery is a distinct and foremost variety for fall and winter storing. The plants make a dwarf, compact growth, averaging 15 to 18 inches long. Because of its compact habit, Burpee's Fordhook Celery is by far more easily blanched than the tall varieties. Although comparatively dwarf, the plants are so solid that they weigh fully two pounds.

Burpee's Fordhook Celery is of remarkably fine quality. The stalks are smooth and entirely free from stringy fibers. They measure **over one-half inch through** when cut. When properly blanched, they are pure white, the small tender heart showing a tinge of light buttery yellow. Burpee's Fordhook Celery has an unsurpassed crisp, nutty flavor. The plants will keep in perfect condition way into the following spring.

The excellent quality of our special strain of Burpee's Fordhook Celery is the direct result of the care we take every year in making single plant selections of the most perfect and true to type plants on Burpee's FORDHOOK FARMS.

A short time ago a Burpee customer wrote in the Market Growers' Journal as follows: "I bought my 'Giant Pascal' seed of . . . , and 'Fordhook' from Burpee Co. Green Bush Beans

String Beans are a most important crop with both the market grower and the home gardener. Freshly picked they are most luscious, wholesome, and nutritious.

Beans belong to the tender class of vegetables, and the seed cannot be sown until the weather is quite warm—about the time the maples are well out in leaf. In the vicinity of Philadelphia early May is about the right time for the first sowing of bush beans. A warm, well-drained sandy loam is best suited. The beans are most delicious and should be picked before the pods have reached their full size. To provide for a continuous supply they should be sown every 10 to 14 days up to August 10th. Where the summers are hot and dry, sow up to the end of May and again from July 15th to August 10th. Plant the seed in rows not less than 18 inches apart, cover with 2 inches of fine dirt, and firm the soil to assist germination. One pound of seed sown thinly fills a row 250 feet long; 90 pounds of seed are usually sown per acre.

They are always stringless, **rich golden yellow**, and the flesh between the beans is solid meat without any open spaces. Due to unfavorable weather conditions, the crop of Burpee's Saddleback Wax has been almost a complete failure this year and we cannot offer it in larger quantities than packets. Pkt. 15¢.

SHELL BEANS

Bush Lima Beans

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm—about the time the oak trees are in leaf. The middle of May is usually safe in the vicinity of Philadelphia. Stick the seed edge-wise 5 inches apart in the row. One pound will sow 150 feet of row.

63 Burpee Improved Bush Lima ♂

The pods are truly enormous in size, borne abundantly, and well filled with handsome beans which are both larger and thicker than those of the popular Burpee's Bush Lima—and fully 8 days earlier!

It differs from Burpee's Bush Lima in having much larger pods, producing more beans, and being considerably thicker. The growth is vigorous, with heavy foliage. Full-grown bushes measure 30 inches in height and 24 inches across the top. The pods are borne frequently in what might be called "clusters" of from 5 to 8. They measure 5 to 6 inches long by $1\frac{1}{4}$ inches wide, and the full size beans are of luscious flavor. They mature in 85 to 95 days from the date of sowing, but should not be planted before the soil has warmed up and the weather is quite settled. Pkt. 15¢; $\frac{1}{2}$ lb. 35¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. By express, 25 lbs. \$6.75; 50 lbs. \$13.00; 100 lbs. \$25.00.

60 Burpee's Bush Lima

This is the original dwarf large-seeded Bush Lima as first introduced exclusively by Burpee in 1890. The bushes grow 18 to 24 inches tall. They are of stout growth and always erect, yet branching so vigorously that each plant develops into a rounded bush from 2 to 3 feet in diameter. **It is an immense yelder.** The pods and beans, however, are not so large, nor are the bushes so prolific as those of the Burpee Improved Bush. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; 1 lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.80; 10 lbs. \$3.35, postpaid. By express, 25 lbs. \$6.00; 50 lbs. \$11.50; 100 lbs. \$22.00.

68 Wood's Prolific

or Improved Henderson Bush Lima This variety belongs to the class of *Small Limas*. They are grown in the South under the name of "Butter Beans." These are hardy, maturing a week before Burpee's Bush

Lima, and worth growing in the North. Of delicious sweet flavor. The plants are of true bush growth and bear tremendously. Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; 1 lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. By express, 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

65 Burpee's Fordhook Bush Lima ◊

Introduced by Burpee—The Most Popular of all Bush Lima Beans

We highly recommend this excellent Burpee introduction to all who prefer Lima Beans of the so-called Potato type. Fordhook Bush is altogether distinct. The plants grow 20 to 30 inches tall and make a spread of from 20 to 24 inches. The strong upright bushes withstand both whipping rains and high winds to a remarkable degree.

The dark green foliage is very substantial and the pods are borne in what may be termed as "clusters" which contain from four to eight pods. The individual pods measure 4 to 5½ inches long by 1½ x 1¼ inches wide. Quite often they are as much as ¾ of an inch thick. The individual beans are crowded together in the pods. There are 4 or 5 of these large beans in a single pod. The flavor of the beans is **sweet and delicious**. Because of its extra-early maturity, Fordhook will bear profusely even where the summers are comparatively short.

Burpee's Fordhook Bush Lima is an excellent cropper. We have counted bushes which had developed as many as fifty-two pods on a plant. It is astonishing to see how comparatively few pods are needed to fill a quart measure with shell beans. This is due to their thickness and the crowded condition of the beans in each pod. The flavor of Fordhook is outstanding—they have a delicious taste not unlike chestnuts. Pkt. 15¢; ½ lb. 35¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. By express, 25 lbs. \$6.75; 50 lbs. \$13.00; 100 lbs. \$25.00.

66 Burpee's New Philadelphia Bush Lima ◊

The Earliest Maturing of all Lima Beans

Burpee's Philadelphia Bush Lima Bean is a most **meritorious variety**, first introduced exclusively by Burpee in 1925. It is the result of a cross between Burpee's Fordhook Bush Lima and Wood's Prolific, and embodies the good qualities of both parents. In season of maturity it is **decidedly earlier** than either of the parent varieties. The pods are ready for picking seven days ahead of Wood's Prolific and are of considerably larger size.

Fordhook
Bush Lima

Our New Philadelphia Bush Lima produces pods which are comparatively **large**, flat, and nearly straight. The average pods measure 4¾ inches in length and 1½ inches in width, containing four fair-sized flat beans of **excellent quality**. In color and general appearance the foliage is similar to Wood's Prolific, but slightly larger. The plants are of upright habit, **producing pods in the greatest abundance** well to the tip of the flower-spikes, which rise clear above the foliage. The earlier pods, however, are set quite close to the ground and are borne in **clusters of six to eight**. Southern planters will find that it far surpasses the bush Sieva or "Butter Bean," as it matures its pods considerably earlier and bears a much heavier crop.

Burpee's Philadelphia Bush Lima is hardy and requires a comparatively short season, which is of the greatest importance to our northern customers who require a very early variety. Pkt. 20¢; ½ lb. 40¢; lb. 65¢; 2 lbs. \$1.15; 5 lbs. \$2.60; 10 lbs. \$4.85, postpaid. By express, 25 lbs. \$8.00; 50 lbs. \$15.50; 100 lbs. \$30.00.

They are invariably of superb flavor. They easily attain a height of from 10 to 12 feet. The pods are produced most abundantly until the vines are killed by severe frost. They are **borne in clusters** of from 4 to 8. Pkt. 15¢; ½ lb. 35¢; 1 lb. 50¢; 2 lbs. 90¢; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. By express, 25 lbs. \$6.75; 50 lbs. \$13.00; 100 lbs. \$25.00.

95 Burpee's Sunnybrook ◎

The main features of this fine new pole lima bean are its **extreme earliness** and **tremendous prolificness**, each spike carrying from 5 to 10 pods of large size. Each pod is closely packed with 4, and often 5, large, thick, meaty, light green beans of the **finest quality**. It is considerably earlier in producing pods ready for picking than any other large-seeded pole lima, and has proved to be even as **early** as the Carolina or Sieva Bean.

The vines are of most vigorous growth, producing many lateral or side branches, all of which are literally **covered with the deep green pods** throughout the season. Pkt. 20¢; ½ lb. 40¢; 1 lb. 60¢; 2 lbs. \$1.10; 5 lbs. \$2.40; 10 lbs. \$4.50, postpaid. By express, 25 lbs. \$7.50; 50 lbs. \$14.50; 100 lbs. \$28.00.

96 Early Leviathan ◎

It will not only give large lima beans earlier than any other strain, excepting Burpee's Sunnybrook Pole Lima, but is also **extremely productive**, both **early** and throughout the season. It is a strong grower, clinging well to the poles, and is a sure cropper. The pods differ from those of other early pole limas in being straighter and longer. They are borne in large clusters and contain 3 or 4, and sometimes 5, large beans each. An excellent home garden and market variety. Pkt. 10¢; ½ lb. 25¢; 1 lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.80; 10 lbs. \$3.35, postpaid. By express, 25 lbs. \$6.25; 50 lbs. \$12.00; 100 lbs. \$23.00.

103 Carolina or Sieva The "Butter Bean" of the South This variety is extremely popular throughout the South. It is well worth growing in the North because of its earliness, hardiness, and wonderful productiveness. The vines grow quickly and mature a fine crop of the small but attractive pods. The plants bear until frost. One pound is required to plant about 150 poles. Pkt. 10¢; ½ lb. 25¢; 1 lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. By express, 25 lbs. \$6.50; 50 lbs. \$12.50; 100 lbs. \$24.00.

"Good as Gold" ◎ This mark (◎), now called a **bull's-eye**, was used by the ancient alchemists to represent gold. We have used a **bull's-eye** (◎) for many years to mark those varieties of Vegetables which we consider the very best of their class and most satisfactory for general cultivation throughout the country. If you are not posted as to the sorts most suitable for your own section, we recommend that you make your selection from those marked with a **bull's-eye**.

Burpee's Peas

The food value of Peas is exceedingly high, and the flavor, especially in the newer and improved varieties, is beyond comparison. To provide a continuous supply, the hardier round-seeded varieties are sown in spring as soon as the ground is fit. For later sowings the wrinkled-seeded kinds are preferred on account of their superior flavor, but they are less hardy. **Succession sowings should be made at intervals of 10 to 14 days during the cool weather.** One pound of seed will sow 120 feet of single row. In drills 100 to 150 pounds are required per acre.

Three Grand Burpee Varieties of SWEET CORN

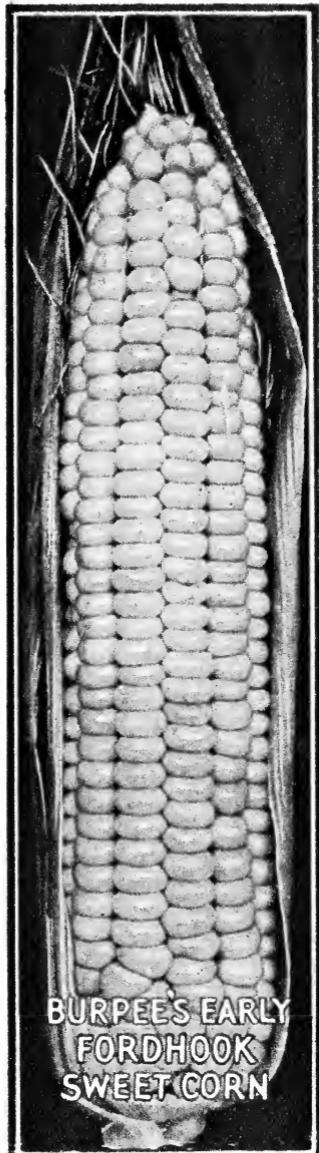

316 Burpee's Delicious ◎

Illustrated in color on the opposite page

BURPEE'S DELICIOUS is so named because the most outstanding characteristic is its delicious flavor. Being a chance sport from the famous Burpee's Golden Bantam, it has inherited the delicious buttery taste which heretofore was not present in any other variety.

Burpee's Delicious originated with our good friend, Dr. Herbert Hoffman, of Merchantville, N. J., who discovered it during the fall of 1916 among his patch of Burpee's Golden Bantam Corn.

Burpee's Delicious makes a strong and vigorous growth, 5 to 7 feet tall, and each stalk carries two fine ears measuring close to 8 inches. The kernels are broad and deep. They are pearly white, with fine thin skin enclosing the rich delicious pulp. Pkt. 15c; $\frac{1}{2}$ lb. 35c; lb. 50c; 2 lbs. 90c; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. By express, 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

325 Burpee's Sunnybrook ◎

Illustrated in color on the opposite page

BURPEE'S SUNNYBROOK Sweet Corn originated from the same plant as Burpee's Delicious and consequently it resembles it in many ways. However, the ears are a trifle smaller and the kernels are even broader, and it matures a few days earlier.

The ears of Burpee's Sunnybrook are of attractive appearance and of handy size for corn on the cob. The kernels are a **bright golden yellow**. They are broad and deep, and therefore extremely meaty. The rows and kernels are set closely together around a small cob. Of a luscious sweet and buttery flavor, greatly resembling that of Golden Bantam. The thick and tightly folded husk is an important feature with the variety because the corn ear worm seems to find it difficult to work its way into the ears. Pkt. 15c; $\frac{1}{2}$ lb. 35c; lb. 50c; 2 lbs. 90c; 5 lbs. \$2.00; 10 lbs. \$3.75, postpaid. By express, 25 lbs. \$5.50; 50 lbs. \$10.50; 100 lbs. \$20.00.

305 Burpee's Early Fordhook ◎

This is one of the largest-eared extra-earlies, the ears averaging 6 to 7 inches in length. Both the grains and cob are pure white. The ears are 8-rowed, with quite small cob and deep grains. They mature a few days earlier than Golden Bantam.

Early Fordhook has a most delicate and tasty flavor. It is a superb variety for both the home gardener and the market grower who appreciate an early and productive variety of quality. Pkt. 10c; $\frac{1}{2}$ lb. 25c; lb. 40c; 2 lbs. 70c; 5 lbs. \$1.60; 10 lbs. \$3.00, postpaid. By express, 25 lbs. \$5.25; 50 lbs. \$10.00; 100 lbs. \$19.00.

"Your catalog is a gem."

"I shall be happy to see you from time to time when you come this way to see your seed crops."

"The colored plates are exquisitely fine, the best that I have seen."

"I remember with pleasure my visit to Fordhook."

"I wish to thank you most heartily for the seeds which you so kindly sent, and for the extras which I will carefully test."

"I referred a great number of people to your seed house as absolutely reliable in all respects."

"Your last catalog is one of the handsomest, most compact and well arranged of any which I have seen."

"Should be very glad to visit Fordhook, but alas, I can hardly get away from home one day a year now, as I have so many thousand experiments brewing all the time. I should be delighted to see you if you can stop over at Santa Rosa."

"I have received two copies of your 'Annual' for this year, and have given one of them away, and the other I have kept for reference."

"I remember well my former visit to your wonderful Floradale Farms several years ago where I saw much of great interest to me."

GRASS SEED

Nothing is more important to the farmer than that the grass seed he sows be pure and clean. The seed should also be plump, heavy, and well ripened, so as to insure a good stand. First-class, thoroughly recleaned seed, even though considerably more costly in the beginning, is really much cheaper in the end than the light, chaffy grades generally sold at much lower prices, even if the latter is free from weed seeds.

Planting Calendar for FLOWERS

The best time to start a flower-bed is early in the spring, as most seeds germinate best during the moist spring weather. Early sowings also give earlier and longer seasons of bloom, but with just a little extra care anyone can have a fine display in the flower garden from plantings made as late as June 1.

Plant During JUNE in the Garden

It is still time to make a garden during June and nearly all flowers listed for April and May planting will give good results if sown now. During the warm June weather seeds will germinate quickly. This month is ideal for sowing perennial seeds in a special seed-bed, so that the plants will be of good size for setting in the permanent place the latter part of August or September. You can still start your lawn during June providing you can water it regularly during the hot summer months.

Plant During Summer and Fall

A garden can still be started in July by choosing quick-growing Annuals, such as Sweet Alyssum, Ageratum, California Poppies, Larkspur, Petunias, Phlox, and others. Of course, care must be taken to water them while the weather remains dry.

August and September are good months to start perennials for next year's blooming. In many sections September is ideal for starting a lawn. The planting of Dutch Bulbs, such as Tulips, Hyacinths, Narcissus, and others, should be taken care of during late September and October. Write for a free copy of our Bulb Catalog published in August.

The Royal Asters come into bloom after the Queen of the Markets have passed. It is their long blooming season and excellent habit which has given them a foremost place.

The fine double flowers are much larger than the Queen of the Markets. In fact there are few other Asters which grow to such large size. The form of the flowers is nearly ball shaped, with broad incurved petals.

The blooms are borne abundantly on long strong stems. The habit of the plants assures them a place in the home garden, where they are wanted for beds or borders. The bushes grow 2 feet tall and branch freely near the ground, so that all the flowers have long stems.

1636 Royal Lavender The color is a clear bright shade of lavender. It is a flower of large size and will stay fully double throughout the blooming season. The well-rounded flowers are carried on long and substantial stems. Pkt. 15¢; $\frac{1}{2}$ oz. 40¢; $\frac{1}{4}$ oz. 65¢; $\frac{1}{2}$ oz. \$1.10.

1637 Royal Pink This is a color which is quite often combined with Royal Lavender because of the appealing color contrast the two varieties give. The rich pink flowers are large and fully double. A handsome variety. Pkt. 10¢; $\frac{1}{2}$ oz. 35¢; $\frac{1}{4}$ oz. 55¢; $\frac{1}{2}$ oz. 95¢.

1639 Royal White Like most white Asters, Royal White is planted most extensively by both home gardeners and those who grow Asters for the cut-flower market. It is a well-shaped, fully double flower, composed of thick, substantial petals. Pkt. 10¢; $\frac{1}{2}$ oz. 35¢; $\frac{1}{4}$ oz. 55¢; $\frac{1}{2}$ oz. 95¢.

Giant Crego Asters

This beautiful type of American Asters is illustrated in color on the back cover

Burpee's Giant Crego Asters are one of the prettiest types in existence. The flowers are large, measuring 4 to 5 inches in diameter and about 2 1/2 inches thick. They are fully double and are composed of long graceful petals which are attractively curled and twisted. The peculiar arrangement of the petals gives them an artistic appearance not unlike a Chrysanthemum.

In the garden Crego's Giant Asters are valuable because they form a well-rounded, compact plant about 2 to 2 1/2 feet tall. They are classed as a midseason type, filling in the season between the early and late Asters. On our Fordhook Farms they bloom all during August and the early part of September. The flowers are carried on long strong stems, so that they are suited for cutting. They last a long time and always bring a good price as cut-flowers, but they do not ship particularly well.

1606 Shell-Pink A lovely shell-pink Aster of great size and beautiful form. The blooms are large, fully rounded, and the shaggy arrangement of the petals is exquisite. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

1607 Azure Blue A beautiful shade of deep sky blue with just a faint hue of pink. It is an excellent free-blooming variety, carrying its large double flowers on fine long stems. Pkt. 15¢; 1/2 oz. 45¢; 1/4 oz. 75¢; 1/2 oz. \$1.25.

1608 Purple This is an outstanding and lovely color which looks well in solid beds or grouped together with contrasting lighter shades. The heavy blooms are of a rich deep purple color. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢.

1609 Lavender This is a particularly pleasing shade of silvery lavender. It is an exquisite color which may be used alone or in combination with white or shell-pink. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

1610 Rose-Pink Those who prefer bright shades will be much pleased with this variety which has magnificent flowers of a deep rose-pink shade. The blooms are of large size and perfect form. They are always fully double. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

1611 Crimson This is a striking color, rather rare among our fall blooming plants. It is a brilliant crimson which goes well with the massiveness of the well-formed flowers. The blooms are carried on fine long stems and make excellent cut-flowers. Produces a wealth of fine blooms. Pkt. 15¢; 1/2 oz. 45¢; 1/4 oz. 75¢; 1/2 oz. \$1.25.

1613 Dark Blue Here is a shade which lends itself well to many combinations. It may be planted alone in solid beds or combined with any other shade of Asters offered in this class. The flowers are not only very large, but the artistic shagginess of the petals makes them very desirable. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

Giant Crego Aster, White

1612 White The pure white flowers grow to large size. They are always fully double and never show a yellow center until they have passed their prime. The white is a particularly favorite variety for both garden display and cutting. It is a free and continuous bloomer, carrying the magnificent flowers on long strong stems. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

Comet Asters

This European type of Asters enjoys great popularity in this country. The general appearance of the flowers is similar to the favorite Crego Asters. The blooms are not as high in the center, however. In habit of growth the plants are strictly upright, with the blooms facing upward. This is a fine class of Asters for bedding because the plants are of even height and compact growth. They bloom about the same time as the Crego Asters. Plants measure 12 to 15 inches tall and they are covered with flowers.

1665 Giant White The large flowers are pure white. The individual flower petals are long. They are artistically curled at the ends and of a fine loose arrangement. Pkt. 10¢; 1/2 oz. 35¢; 1/4 oz. 55¢; 1/2 oz. 95¢.

1667 Giant Mixed This is a wonderful assortment of colors. In addition to the shades of rose, pink, lavender, purple, red, and crimson, the mixture contains some fine striped varieties. They are all fully double until the flowers begin to decline. Their upright habit and free flowering character make them well suited for solid beds or borders. Pkt. 10¢; 1/2 oz. 30¢; 1/4 oz. 50¢; 1/2 oz. 85¢.

Burpee's Pansies

Our strains of Pansies are recognized for size and texture of the flowers, strong compact growth, and non-blooming character. Grown under favorable conditions, the plants will bloom for a long time. The varieties we list are all standards in their color classes and come true to name.

Pansies are easily grown and bloom profusely for many months. Sow the seed indoors early in March or outdoors as early as the ground can be prepared into a fine loose condition. If sown during August, the plants will begin blooming very early the following spring.

2513 Burpee Blend of Giant Fancy Pansies

For the lover of fine Pansies, this blend cannot be surpassed. It contains the largest and most beautiful of all blotched Pansies that have been developed after many years of careful and close selection. The Burpee Blend contains only well-formed, expanded flowers of uniform large size with an unusual range of colors and markings. The texture of the blooms is heavy and thick, so that the blooms are well waved and crinkled on the edges. The large flowers are borne upon long stiff stems which make them admirably suited for cutting.

In selecting the Burpee Blend, we have paid particular attention to include only compact, rounded plants of sturdy habit and profuse blooming qualities. Not only do the plants bloom profusely, but they also bloom continuously throughout the spring, summer, and fall, and where the weather remains cool the flowers will not decrease in size during the late season. The seed of Burpee's Blend is necessarily expensive but it is well worth all it costs. Pkt. 25¢; $\frac{1}{8}$ oz. 80¢; $\frac{1}{4}$ oz. \$1.35; $\frac{1}{2}$ oz. \$2.30; $\frac{1}{2}$ oz. \$3.95.

CLIMBING FLOWERS

2906 Balloon Vine (Love in a Puff)

A graceful annual climber, growing quickly 5 to 10 feet tall. The foliage is light green, and the small flowers are a whitish green color. These inconspicuous blooms are followed by attractive balloon-shaped seed-pods of an inch or more in diameter. Sow the seed when the maples are in full leaf, covering with $\frac{1}{4}$ inch of fine soil. It does best in a light sandy soil and a sunny exposure. Because of its rapid and free growth it is planted widely to cover fences, garden houses, and arches. Pkt. 10¢; $\frac{1}{2}$ oz. 25¢; oz. 40¢.

2911 Canary Bird Flower

(*Tropaeolum peregrinum*)

The flowers are a rich golden yellow, very bright and attractive, with their fringed flower petals. The foliage is delicate with finely divided five-lobed leaves of a bright light green color. It succeeds best in rather cool locations, but exposed to the full sun. It will bloom freely and continuously throughout the summer and fall. Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢.

CANARY BIRD FLOWER

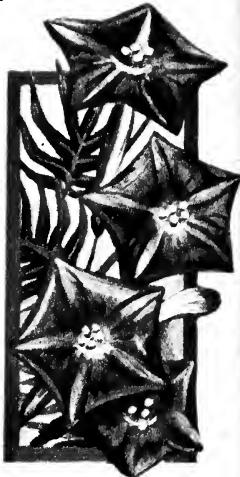

Cardinal Climber

2912 (*Ipomoea cardinalis*)

An easily grown climber developing to perfection in sandy loam soil.

The leaves resemble those of a fine Japanese Maple. They cover the vines completely and give good shade, admitting, however, plenty of air when planted on the porch.

The brilliant scarlet flowers are borne profusely. Pkt. 15¢; $\frac{1}{2}$ oz. 45¢; $\frac{1}{4}$ oz. 75¢; $\frac{1}{2}$ oz. \$1.25.

2975 Climbing Foxglove

(*Lophospermum scandens*)

A beautiful annual Mexican climber and one of our finest trailing annuals. The graceful flowers are of large size and resemble Foxgloves in shape. They are of a rich rosy purple color. The foliage is of a velvety texture. Blooms continuously from July on and is fine for outdoor or indoor culture. Start the seed indoors during April in a box containing good garden soil and cover thinly with fine soil, or sow outdoors when the maple leaves are expanding. Under favorable conditions the vines grow 10 feet tall. The flowers are borne with unusual profusion from July until frost. Pkt. 15¢; $\frac{1}{2}$ oz. 35¢; $\frac{1}{4}$ oz. 55¢.

Cardinal Climber
A most attractive slender climber with bright cardinal-red flowers borne all over the vines

2913 Cobaea Scandens (Cup and Saucer Vine)

Of very rapid growth, 10 to 20 feet tall. In our northern climate the seed should be started indoors and the plants set out when the nights have become quite warm. The young flowers are light green, changing to rose-purple as they open up fully. They are quite large, borne on long stems and of bell shape. In warmer sections it will live outdoors for many years. To encourage an even and quick germination press the flat seeds edgewise into the soil so that the upper edge comes even with the soil surface. It is a good climber for covering tall unsightly fences or garden houses where plenty of shade is wanted. Equally as fine for providing shade for the porch. Pkt. 15¢; $\frac{1}{2}$ oz. 25¢; $\frac{1}{4}$ oz. 40¢.

Cypress Vine

A slender climber of quick growth having small, finely divided dark green foliage. The vines are thickly starred with small, brightly colored flowers. Very desirable for small ornamental trellises or wire supports. Cypress Vine requires a warm sunny situation to grow luxuriantly. It may be grown in porch or window boxes to climb up on a trellis. The seed should be sown when the trees are starting out in leaf, or farther North may be started in boxes in March to be planted in the garden when the trees are out in leaf and the nights have become quite warm.

2919 Scarlet Intensely rich scarlet flowers borne with the greatest profusion from June until killed by frost. A free climber and profuse bloomer. Pkt. 10¢; $\frac{1}{2}$ oz. 30¢; oz. 50¢.

Dolichos—Hyacinth Bean

The two varieties of Dolichos are by far the most showy and useful for any gardener. They are of remarkably strong and sturdy growth, quickly growing to a height of 8 to 10 feet. The broad leaves afford good shade and make a fine screen to the porch or garden house.

Plant the seed after the weather has become quite warm and when the maples are out in full leaf. The plants produce a wealth of flowers during September and October. The seed may also be started indoors during early April and set out in the open late in May.

2927 Darkness The color of stems and leaves of Darkness is a purplish red. It mixes well with other climbers and produces a good variety. The numerous long spikes of pea-like flowers are deep reddish maroon, not unlike Wisteria. The blooms are followed by beautiful metallic purple seed-pods. Sow the seed one inch deep when the maples are in leaf. Space or thin to stand 8 inches apart. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢.

2929 Daylight A climber of rapid growth always attracting attention. The vines grow quickly to a height of 8 to 10 feet and bloom profusely from base to summit. The large pure white flower-spikes stand out boldly from the rich green foliage. As the flowers drop they are succeeded by broad white pods which remain fresh for a long time and add to the appearance. Pkt. 10¢; oz. 25¢; 4 ozs. 50¢.

2960 Japanese Variegated Hop

(*Humulus japonicus variegatus*). Where an attractive climber is desired that will stand rough usage and make a dense shady mass, there is nothing better than Japanese Hop. It is grown for its foliage, since the greenish flowers are rather small. The leaves are strikingly variegated; the first color is bright deep green, distinctly marked and blotched with silvery white, tinged with yellow; now and then a leaf will be almost snow-white, and another one almost pure green. A strong grower—20 to 30 feet in two to three months' time; not injured by heat or insects. Sow the seed when the maples are coming into leaf,

covering with $\frac{1}{2}$ inch of fine soil. Late sown seed quite often germinate extremely slowly and the seedbed should be kept watered regularly until the seedlings appear above ground. Pkt. 10¢; $\frac{1}{4}$ oz. 35¢; 4 ozs. 55¢.

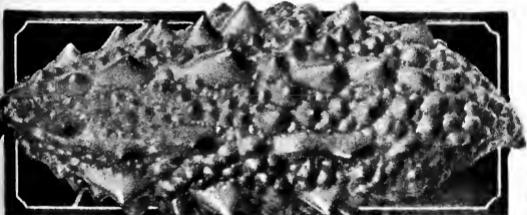

Momordica

These are very interesting annual climbers, with smooth, shining foliage. The flowers are cream with brown spots followed by interesting fruits.

2993 Balsam Apple (*Balsamina*) Attractive rich creamy yellow flowers followed by small fruits about the size of a lemon. When the fruits are ripe they turn to a bright golden yellow color. The pulp of the fruit is blood-red and contains large black seeds. Fine for trellises or low fences. Pkt. 10¢; $\frac{1}{4}$ oz. 30¢; $\frac{1}{4}$ oz. 50¢; oz. 85¢.

Well-grown vines attain a height of 40 to 50 feet in a single season. The seed should be started indoors in March and the young plants set out early in May. Protect the roots with straw during severe freezing. Blooms only where the summers are very warm, but it is grown in cooler sections for its attractive dense foliage. Burpee's Sweet Peas

The Early or Winter-Flowering Varieties

These splendid Sweet Peas were, with a few exceptions, all introduced by Burpee. They are valuable to florists for greenhouse culture and are also adaptable to outdoor planting in warmer climates, such as certain sections of our own southern states, Australia, and South Africa. They do well in many sections where the summer-flowering varieties cannot be grown successfully. In cooler climates they are of value because they bloom a week or ten days sooner than the summer-flowering varieties. This is a decided advantage where early blooms are an important consideration.

Burpee's Sweet Peas

The Summer Flowering Varieties

We recommend the Summer Flowering varieties for general outdoor growing throughout the United States, except in certain sections of the extreme South, where Sweet Peas flower during the winter and where the Early Flowering type gives best results. Many Sweet Pea lovers plant a short row of the Early Flowering kinds to get the advantage of early blooms, depending on the Summer Flowering varieties for their main crop from outdoor plantings during spring or fall.

BURPEE'S GIANT PETUNIAS

It is marvelous to see what expert plant breeders have done with the old-fashioned, small-flowered Petunia which was grown by our grandparents many years ago. These Giant Petunias are all of immense size and heavy texture. Some varieties have plain edges, others are fluted and waved. Again there are others which are fringed in a most artistic manner.

These large-flowered Giant Petunias require a trifle more care to grow than the ordinary type. The very small and expensive seed should be sown carefully indoors in boxes or pans, barely covering the seeds with fine soil.

2534 Apple Blossom A most beautiful tint of apple-blossom pink with fine delicate veins of a slightly deeper shade. Deep in the throat these veins appear as a bright soft green. The blooms are large and much waved, with fine exquisite fringe at the edges. A good strong grower blooming most profusely. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2528 Charm Charm is a beautiful variety with bright rose-pink flowers shading lighter toward the throat. The flowers are large and deeply lobed. They are beautifully waved and have an exquisite fringe. The lemon-yellow throat shows some light apple-green veins. This will appeal to those who show a preference toward the more delicate and dainty shades in flowers. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2539 Elk's Purple Immense flowers of rich deep Elk's Purple. The texture of the petals is substantial and of velvety appearance. They are most attractively waved, forming, with their large lobes, a fine five-fingered star. The velvety black veins add much to the beauty of the magnificent flowers. A strong grower and very profuse bloomer. Always greatly admired. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60.

2542 Fancy The immense flowers are of most artistic form. They are well expanded and have a finely frilled or ruffled edge. The color of the blooms is soft lilac shaded with deeper lilac, heavily veined with deep carmine-purple. The fine artistic network of these veins greatly enhances the beauty of the flower. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2532 Giant Blue and White A lovely variety, with large, well-waved flowers. The blooms are strikingly marked with irregular blotches of deep blue on a pure white ground. No two flowers, even on the same plant, are marked alike. Some of them show decidedly more blue than white, others again show comparatively few blotches of blue. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60.

2535 Lilac Beauty The texture of the petals is heavy and in keeping with their large size. The color is a charming soft lilac-blue which shades into a fine violet-blue near the margin. The beauty of this variety is greatly enhanced by a network of deep violet-blue veins emerging out of the throat. Pkt. 35¢; $\frac{1}{128}$ oz. \$1.00; $\frac{1}{64}$ oz. \$1.60; $\frac{1}{32}$ oz. \$2.45.

2567 Burpee's Defiance

We have been growing this strain of Defiance Petunias for many years on the Burpee Farms in Pennsylvania and California. Every year we have selected the largest and most beautifully marked plants for stock seed. This selection, which has been going on for over twenty years, has given us a strain of Giant Petunias which we believe is unequalled. We know of no other mixed type of Giant Petunias which produces as large flowers and includes as wide a range of beautiful colors.

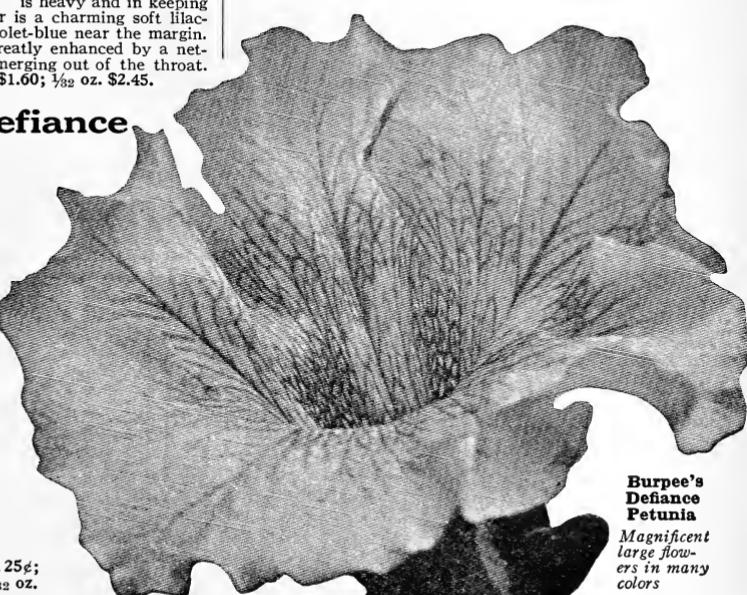

The shades found in Burpee's Defiance Petunia are indescribably rich and varied. Many of the flowers are self-colors, others again shade to white in the throat. The attractively mottled, striped, blotched, and veined flowers deserve particular mention. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10; $\frac{1}{16}$ oz. \$3.60.

2536 Portland Beauty Portland Beauty is a most beautiful flower. The blooms are deeply lobed and much waved, being finely and irregularly fringed on the edges. The color of the blooms is a deep tyrian-rose shaded with carmine and heavily veined with purplish black. The veining is most prominent in the throat, gradually disappearing as it approaches the edges. It is a strong grower and blooms freely. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2541 Scarlet Beauty Scarlet Beauty represents one of the finest types among the Giant Petunias. There is so much substance to the flowers that the petals caused by the deep lobes overlap each other. The lace-like fringe adds to the good appearance of this variety. The color is a brilliant velvety scarlet, shading to a luminous rose, with an attractive pattern of deep purplish crimson veins. An exceptionally fine variety. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35.

2537 White Beauty A distinctly beautiful Giant variety most appropriate for planting in porch boxes, beds, or borders. The blooms are pure white, attractively veined with light apple-green in the throat. Deep in the throat a few veins of copper-carmine add a touch of color to the flowers which, however, is unobserved except upon close inspection. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

2530 White Ruffled Monster No description could convey the beauty of this flower. Of mammoth size and so much waved that it appears almost double. The edges are artistically waved and crinkled. Contrasting with the pure white, there are some beautiful light green veins which run from the throat toward the margin. The effect of this combination is particularly attractive. White Ruffled Monster deserves a place in every garden. It looks well if planted in beds and also shows up to good advantage if grown in hanging baskets or porch-boxes. It is of strong growth and blooms most profusely from midsummer, throughout the fall, and until frost. Pkt. 25¢; $\frac{1}{128}$ oz. 85¢; $\frac{1}{64}$ oz. \$1.35; $\frac{1}{32}$ oz. \$2.10.

Dwarf Spreading Varieties

This class of Bedding Petunias differs from the above in that the plants make well-rounded bushes of 2 feet and more in diameter. They are free flowering and extremely showy.

Burpee's Phlox

Phlox is one of the easiest grown and most satisfactory of all summer-flowering annuals. The brilliant colors always make a good impression. One of the most valuable characteristics of this annual is its free-blooming habit, but in order to have good stocky plants the seedlings should be thinned to stand not less than 6 inches apart in the row. The plants grow 15 inches tall. Sow early in the spring.

2581 Fordhook Finest Mixed

We are offering a blend of all the varieties of the tall annual Phlox described on this page, and have added a few other large-flowered varieties which we feel deserve a place in the mixture. Burpee's New Dahlia-Flowered ZINNIAS

Dahlia-Flowered Zinnias are of very recent origin yet they quickly became known because of their many outstanding features. The flowers are of immense size. They are made up of a large number of small petals which stand well apart, adding greatly to the grace and looseness of the blooms. This is a decided improvement over the Giant Mammoth type, which many gardeners consider stiff in effect. The plants make a strong growth and form a compact, well-rounded bush about 2 feet tall. The flowers are borne on long sturdy stems above the foliage from midsummer until frost.

Sow the seed outdoors thinly in rows when the maples are coming into leaf. Or the seed may be started indoors during March or April in a box filled with fine sandy soil.

Burpee's Snapdragons—Continued

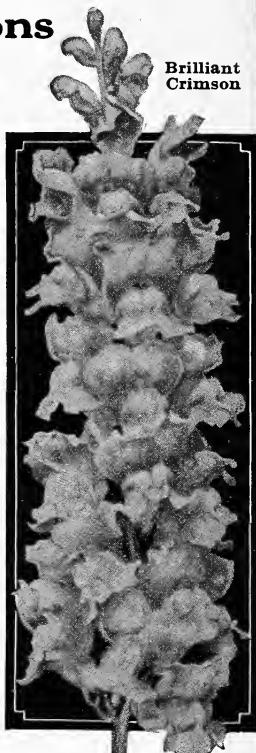

The half-dwarf type of Snapdragon is without question the most popular. It is well adapted for beds or borders and the flower-spikes are long enough for cutting. Snapdragons are superb during the cool early days of summer and during the late fall. Where the summers are moderately cool they can be depended upon to furnish a display from early summer until frost. We have been growing Snapdragons on Burpee's Fordhook Farms for many years and know from comparative tests that our strain cannot be surpassed. The plants have been selected to grow to an even height and produce a profusion of blooms which is sure to attract the attention of the passersby. To those who desire a very dwarf border, we recommend the dwarf mixed varieties offered below.

Coleus

Coleus is very highly valued on account of its brilliantly colored foliage. It may be planted outdoors in well-prepared beds or may be grown as pot-plants. The plants are easily grown and can be had in good condition throughout the winter. They do not develop their best coloring unless they have a sunny position. If the plants show a tendency to grow too tall, the center tips should be pinched out. The culture of Coleus is very easy, and a moderately rich soil which contains plenty of humus and also a good quantity of sand will give excellent results.

1921 Burpee's Sunset (Fordhook Special) The leaves are extremely large, and the colors, variegations, and markings are rich and brilliant. Perennial Flowers

Perennials are the chief standby of the old-fashioned gardens. They require little attention and respond generously to increased care and thorough cultivation. After once being established, they will not only last many years, but also increase in beauty with every season. The seed of perennials may be sown indoors in boxes during February, March, or April, and the young plants set out in their permanent place when 3 to 4 inches tall. Most gardeners sow right out in the open any time during April, May, June, or July. Ask for a free copy of the Burpee Leaflet, "PERENNIALS FROM SEED," which gives complete cultural directions for growing the finest perennials.

BURPEE'S BULBS

The bulbs which we offer on the following pages have been grown with as much care as Burpee's Seeds. Most bulbs add a touch to the garden which cannot be created by any other flowers. Some of our most popular flowers are grown from bulbs. Just think of Dahlias, Gladioli, and Lilies! Yet there are many other flowers grown from bulbs which deserve to be grown just as widely. As a rule, it is easier to grow flowering plants from bulbs than it is from seed. There are flowers grown from bulbs for almost every purpose. Many of them are excellent for garden displays; others are used extensively for pot-plants, and there are also a number of quick-growing climbers.

Caladium— Elephant's Ear

Caladiums are highly valued because of their ornamental leaves. They do best where the plants receive an average amount of sunshine, water, and humidity. If grown in the greenhouse, they look their best. Caladiums are native to the tropical swamps of Brazil and will thrive best in rich soil containing plenty of humus. They are easily grown in any ordinary garden soil. They should be watered regularly, but not in excess, and the water should never be sprinkled on the leaves. Start the bulbs in pots indoors during March and keep in a warm window but shade against the midday sun. About the time the maples are in full leaf, transplant them to the open. The roots of Esculentum may be planted right in the open late in May.

They thrive in a porous sandy soil and the only condition which they do not like is an excess of moisture. Ismene is a tender bulb and cannot stay outdoors in our climate during the winter. The bulbs should be dug up in the autumn after the first light frost has touched the foliage and stored in a dry, frost-proof cellar in the same way as Gladioli. The flowers are very fragrant. Delphinium Hardy Larkspur

Lily-of-the-Valley

8955 Few flowers are as well known and as much appreciated as the Lily-of-the-Valley. After once being planted in a suitable place they will increase in number and will produce their graceful and sweetly scented blooms every spring for an almost indefinite time. We offer strong, field-grown clumps of this ever-popular old favorite which are sure to bloom. 55¢ each; 3 for \$1.45; 6 for \$2.80; 12 for \$5.50; 25 for \$10.90, postpaid.

All of us know the long and beautiful spikes of the Hardy Larkspur which make such a wonderful display during the summer months and early fall. A planting of Delphinium roots will give a quicker effect than can be had from seed. Allow plenty of room for each plant so that they can develop freely. Plant the roots about four feet apart and just lightly cover the top of the roots with an inch of fine soil. In sections where the winters are severe or where the weather alternates between thawing and freezing, a cover of long straw or strawy manure should be placed over the plants during the weeks of the most severe weather to prevent injury by frost.

8931 Belladonna This is one of the best known varieties, with massive spikes set closely with lovely light blue flowers. The spikes grow 4 to 6 feet tall and are produced freely throughout the entire summer. 25¢ each; 3 for 70¢; 6 for \$1.30; 12 for \$2.45; 25 for \$4.75; 50 for \$9.40, postpaid.

8932 Bellamosa This is a lovely counterpart to Belladonna, with most attractive dark blue flowers. The long spikes are heavy and massive, closely set with large double flowers. 25¢ each; 3 for 70¢; 6 for \$1.30; 12 for \$2.45; 25 for \$4.75; 50 for \$9.40, postpaid.

Tritoma

They are a dazzling scarlet, the lower half of the flower being tinged with rich orange. A clump makes a striking show. If the roots are covered during severe winter weather, they will live safely from year to year. 35¢ each; 3 for 95¢; 6 for \$1.80; 12 for \$3.50, postpaid.

8984 Early Perpetual-Flowering Although this superb new type will flower from the first year, we have grown at FORDHORN FARMS a supply of strong roots, anticipating a demand from planters who want strong, free-blooming plants the very first year. The beauty of spring and summer vanishes into a mist of hazy recollection when the Dahlias in our garden make their debut. Pleasing shades of orange and scarlet, yellows as fiery as molten gold, vie their beauty with glorious autumn shades in mellow and warm combinations of rose, salmon-pink, and orchid-mauve—colors and hues no artist could ever hope to portray in their full beauty.

Burpee's Dahlias are well known wherever Dahlias are grown. They have been awarded 9 Gold Medals by the American Dahlia Society and 4 Gold Medals by the Pennsylvania Horticultural Society. In addition to these prizes many of our customers have won highest awards with Dahlia roots purchased from us.

Dahlias are easily grown and are suited for planting in small as well as in large gardens.

In addition to the standard varieties our list includes the best of the late introductions. For 1927 we are offering 8 outstanding new giant varieties, fully described on the next page.

New Dahlias for 1927

Fordhook Model

This flower measured ten inches in diameter, grown under ordinary field culture

7960 Fordhook Victory

A giant Decorative Dahlia, with most attractive well-formed blooms, carried on strong and sturdy stems. Even under ordinary garden culture, the flowers attain an unusually large size. The petals are well placed and of substantial texture. Fordhook Victory is destined to become a favorite variety, as most Dahlia-lovers will appreciate its rich outstanding color. The blooms are a lovely shade of rich tyrian-rose. The blooms are a lovely shade of rich tyrian-rose. \$10.00 each; 3 for \$27.00.

7924 Fordhook Erecta

We know of no other Dahlia having a better habit of growth, or producing so freely during the entire season. The blooms are perfectly formed—they are well rounded, fully double, and exceptionally thick. The habit is sturdy and upright, and the blooms are held stiffly erect above the foliage. The color is a bright amaranth-pink, shading lighter toward the base of the petals. \$10.00 each; 3 for \$27.00.

7959 Fordhook Radiance

The combination of exquisite coloring, size, form, and good habit of this magnificent Dahlia is hard to beat. The flowers are of immense size, refined form, and are carried on long, stiff stems. The color is bright peach-red, suffused with metallic bronze. There is just a suspicion of soft salmon on the outer petals and a touch of buff-orange on the inner petals. \$10.00 each; 3 for \$27.00.

7955 Fordhook Apricot

A beautiful Decorative Dahlia of good size and most pleasing color. The general effect is a bright apricot tint. Closer examination reveals a blend of light coral-red shaded salmon. Toward the base of the petal, rays of bright yellow mingle with the apricot, and shade into pure yellow at the base. Well-shaped flowers. \$5.00 each; 3 for \$14.00.

7957 Fordhook Model

The color is a lovely shade of silvery lilac with an iridescent sheen of pink. Perhaps the name mallow-pink identifies this color best. Under ordinary field culture we have cut flowers measuring 12 inches in diameter. The wiry stems are inclined to bend down under the great weight of the mammoth blooms, but they are strong enough to hold the blooms above the foliage. \$7.50 each; 3 for \$20.00.

7908 Garden Glow

An exceptionally fine Hybrid-Cactus Dahlia. The blooms are borne on strong wiry stems, above all foliage. Its unique and pleasing color appeals to all—no variety having been more admired or more freely ordered, both at Fordhook and at the various Dahlia Shows where it was exhibited. Orange-red over chrome-yellow, the tips and base pure soft chrome-yellow. \$10.00 each; 3 for \$27.00.

7906 Miss Fordhook

This is a gem in every sense of the word, belonging to the Cactus type—free-flowering, of perfect form, artistic color, and excellent habit. Although producing flowers very early in the season, the plants continue blooming until frost, and the flowers are always double. The color is a bright shade of amaranth-pink, the inner petals being white, softly suffused with rose-pink toward the tips. \$5.00 each; 3 or \$14.00.

7912 Fordhook Chevalier

A beautiful Hybrid-Cactus Dahlia, combining with its beautiful autumn tints a remarkable freedom of blooms. The large blooms are at all times fully double. They are a most appealing shade of light orange-buff suffused with darker orange and backed with bronzy red.
